
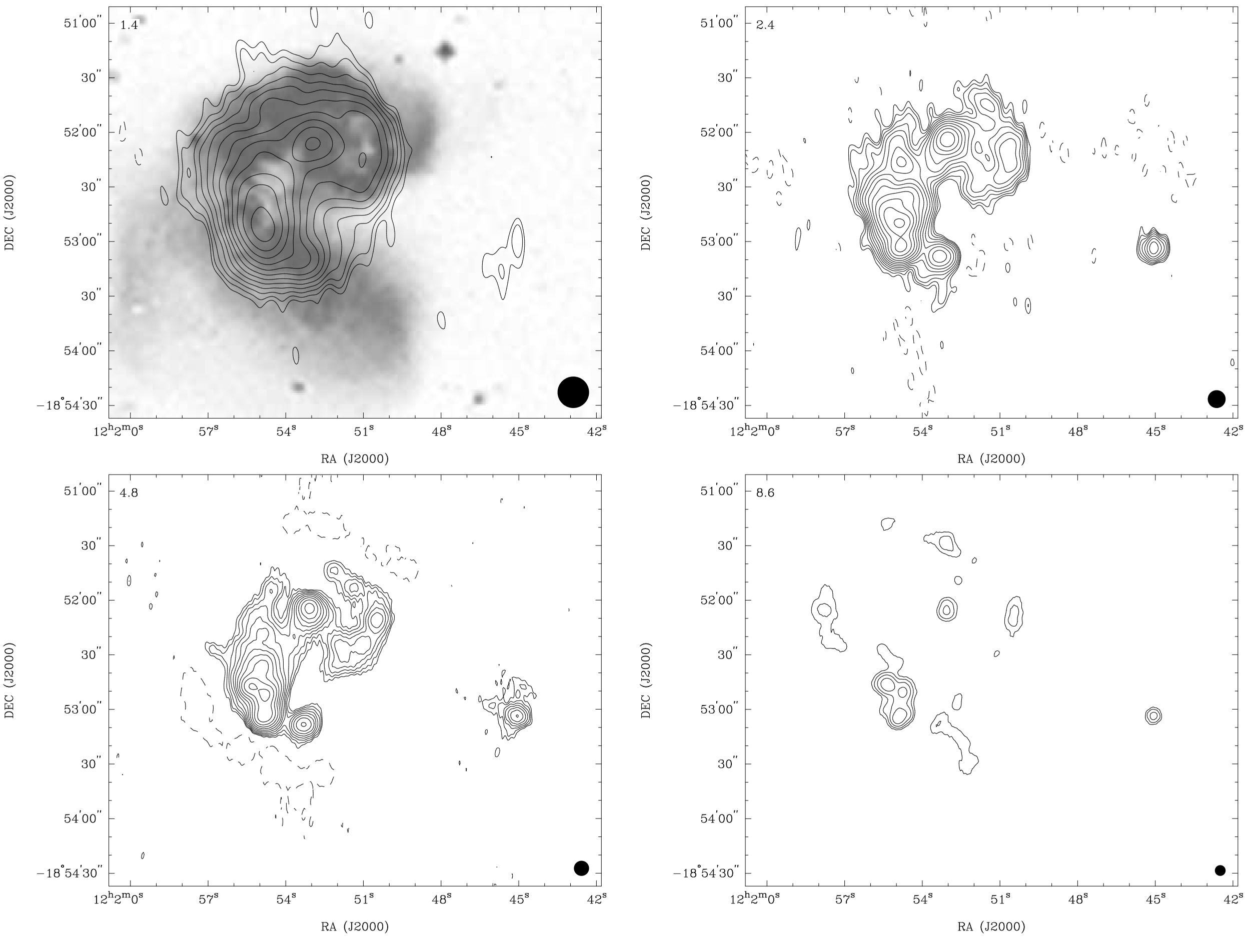

Figure 1. Radio continuum maps of the interacting galaxies NGC 4038/9 (The "Antennae"). The frequency (in GHz) is displayed in the top left corner, the synthesised beam in the bottom right corner of each image. The 20-cm image (top left) is overlaid on an optical image (greyscale) taken from the Digitized Sky Survey[1]. Please note that the 3-cm image (bottom right) possibly contains some artifacts at the low intensity levels. The r.m.s. noise in each image is about 0.1 mJy beam^{-1}. — [1]The Digitized Sky Survey (DSS) was produced by the Space Telescope Science Institute (STScI) and is based on photographic data from the UK Schmidt Telescope, the Royal Observatory Edinburgh, the UK Science and Engineering Research Council, and the Anglo-Australian Observatory.
