

Searching for pulsars in Nearby Galaxies with MeerKAT

Emma Carli

PhD supervised by Prof. Ben Stappers and Dr. Lina Levin Preston
Timing and Imaging of compact sources with SKA pathfinders and precursors
Kerastari, Greece

TRAPUM: a MeerKAT Large Survey Project

Transients and Pulsars with MeerKAT

TOTAL DISCOVERIES: 191

EXGAL: 13

FERMI: 27

GC: 72

MGPS-L: 78

TEV/SNR/PWNE: 1

LAST UPDATED: 2023-05-31 00:02

TRAPUM.ORG/DISCOVERIES/

PIs: Michael Kramer and Ben Stappers

Project Scientist: Ewan Barr

Builders: W. Chen, Y.P. Men, P. Voraganti Padmanabh, L. Kuenkel, V. Ventakraman Krishnan, J. Behrend, D. Horn and more...

Pulsar and transient searches:

- Fermi gamma-ray sources (Chair: Rene Breton)
- Galactic plane (Chair: Ewan Barr)
- Supernova Remnants, Pulsar Wind Nebulae, TeV sources (Chair: Ben Stappers)
- Globular clusters (Chair: Alessandro Ridolfi)
- Nearby Galaxies (Chair: Lina Levin Preston)
- Follow-up (Chair: Marta Burgay)

TRAPUM: a MeerKAT Large Survey Project

PIs: Michael Kramer and Ben Stappers

Project Scientist: Ewan Barr

Transients and Pulsars with MeerKAT

Pulsar and transient searches:

- Fermi gamma-ray sources: **talk by Marta Tuesday**
- Galactic plane: **talk by Miquel Wednesday, Prajwal Thursday**
- Supernova Remnants, Pulsar Wind Nebulae, TeV sources (**James Turner**)
- Globular clusters: **talk by Arunima Wednesday**
- Nearby Galaxies: **this talk**
- Follow-up (Marta Burgay)

TOTAL DISCOVERIES: 191

EXGAL: 13

FERMI: 27

GC: 72

MGPS-L: 78

 TRAPUM.ORG/DISCOVERIES/

The MeerKAT telescope

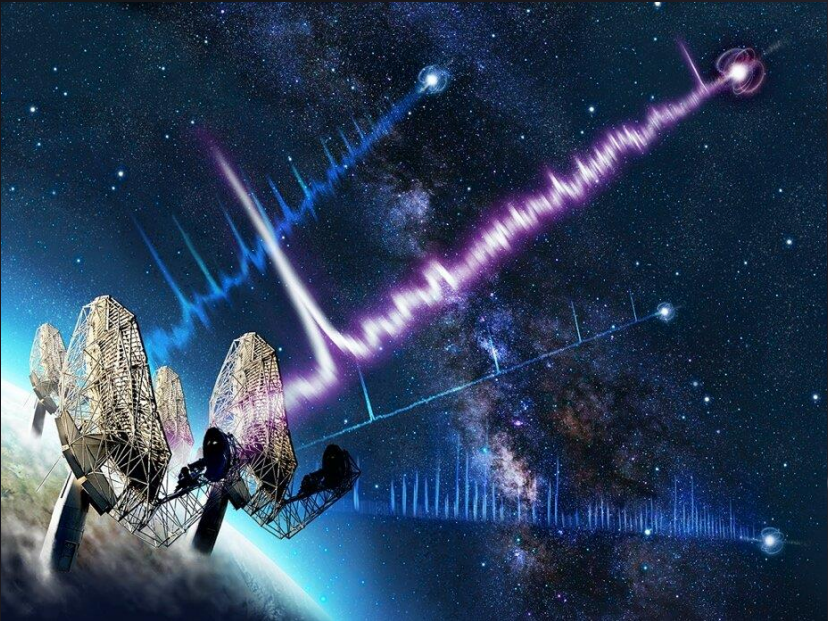

Thank you to SARAO, especially to Sarah Buchner for scheduling observations!

Enrico Sacchetti

SKA South Africa

Danielle Futselaar

- Precursor of the mid-frequency component of the Square Kilometer Array
- MeerKAT: interferometer in the Karoo desert in South Africa
- 64 dishes of ~14m diameter, 8km longest baseline
- L-band, S-band, UHF receivers
- Pulsar timing and searching backends

Why extragalactic pulsars?

Jacques C Astrophotography

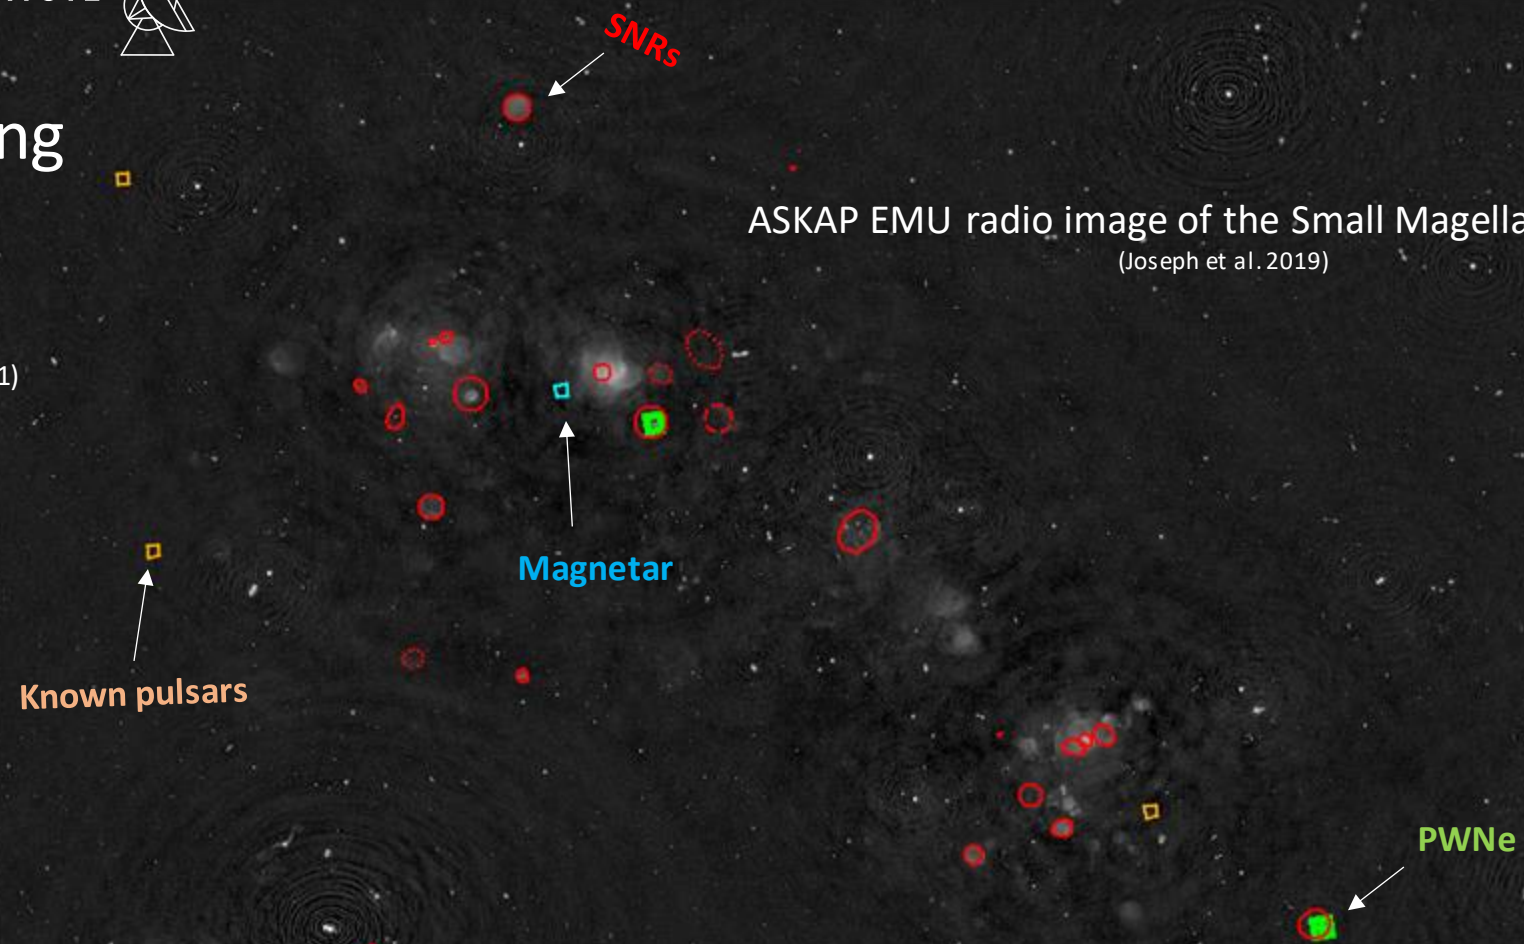

CSIRO

- Rare: Of 3k pulsars discovered, 31 are extragalactic
- All in the Magellanic Clouds, radio discoveries with Murriyang 1983-2022
- New observatory with higher sensitivity : more pulsars to find!
- Different galaxies: properties impact pathways to Neutron Stars and population
- Compare with extragalactic NS merger rates from GW
- FRBs are linked to NS, one repeater in a similar galaxy to the MCs

Beamforming with FBFUSE

(MOSAIC, Chen et al. 2021)

ASKAP EMU radio image of the Small Magellanic Cloud
(Joseph et al. 2019)

- Recent star formation: many Supernova Remnants, Pulsar Wind Nebulae

Beamforming with FBFUSE

(MOSAIC, Chen et al. 2021)

- ~800 beams per obs (<1' width), placed freely around pointing direction.
- Murriyang Multi Beam has 13 beams (14' width): we cover 5x less area

MKAT 1deg incoherent beam

Parkes 14' beam

- More freedom of placement and easier localisation than Murriyang

Searching on APSUSE

SKA South Africa

Ewan Barr

- On-site processing in computing cluster underground
- Periodicity search, segment acceleration search, transient search
- About a month of processing before see candidates, then raw data deleted
- Data kept in reduced resolution for potential future reprocessing e.g. FFA

Previously known in the SMC

- Irregular dwarf galaxy 60 kpc away
- 7 radio pulsars; median DM 115 pc cm^{-3}
- Prediction to find 10 additional radio pulsars with MeerKAT if scan whole galaxy (Titus et al. 2020)

Discoveries in the SMC

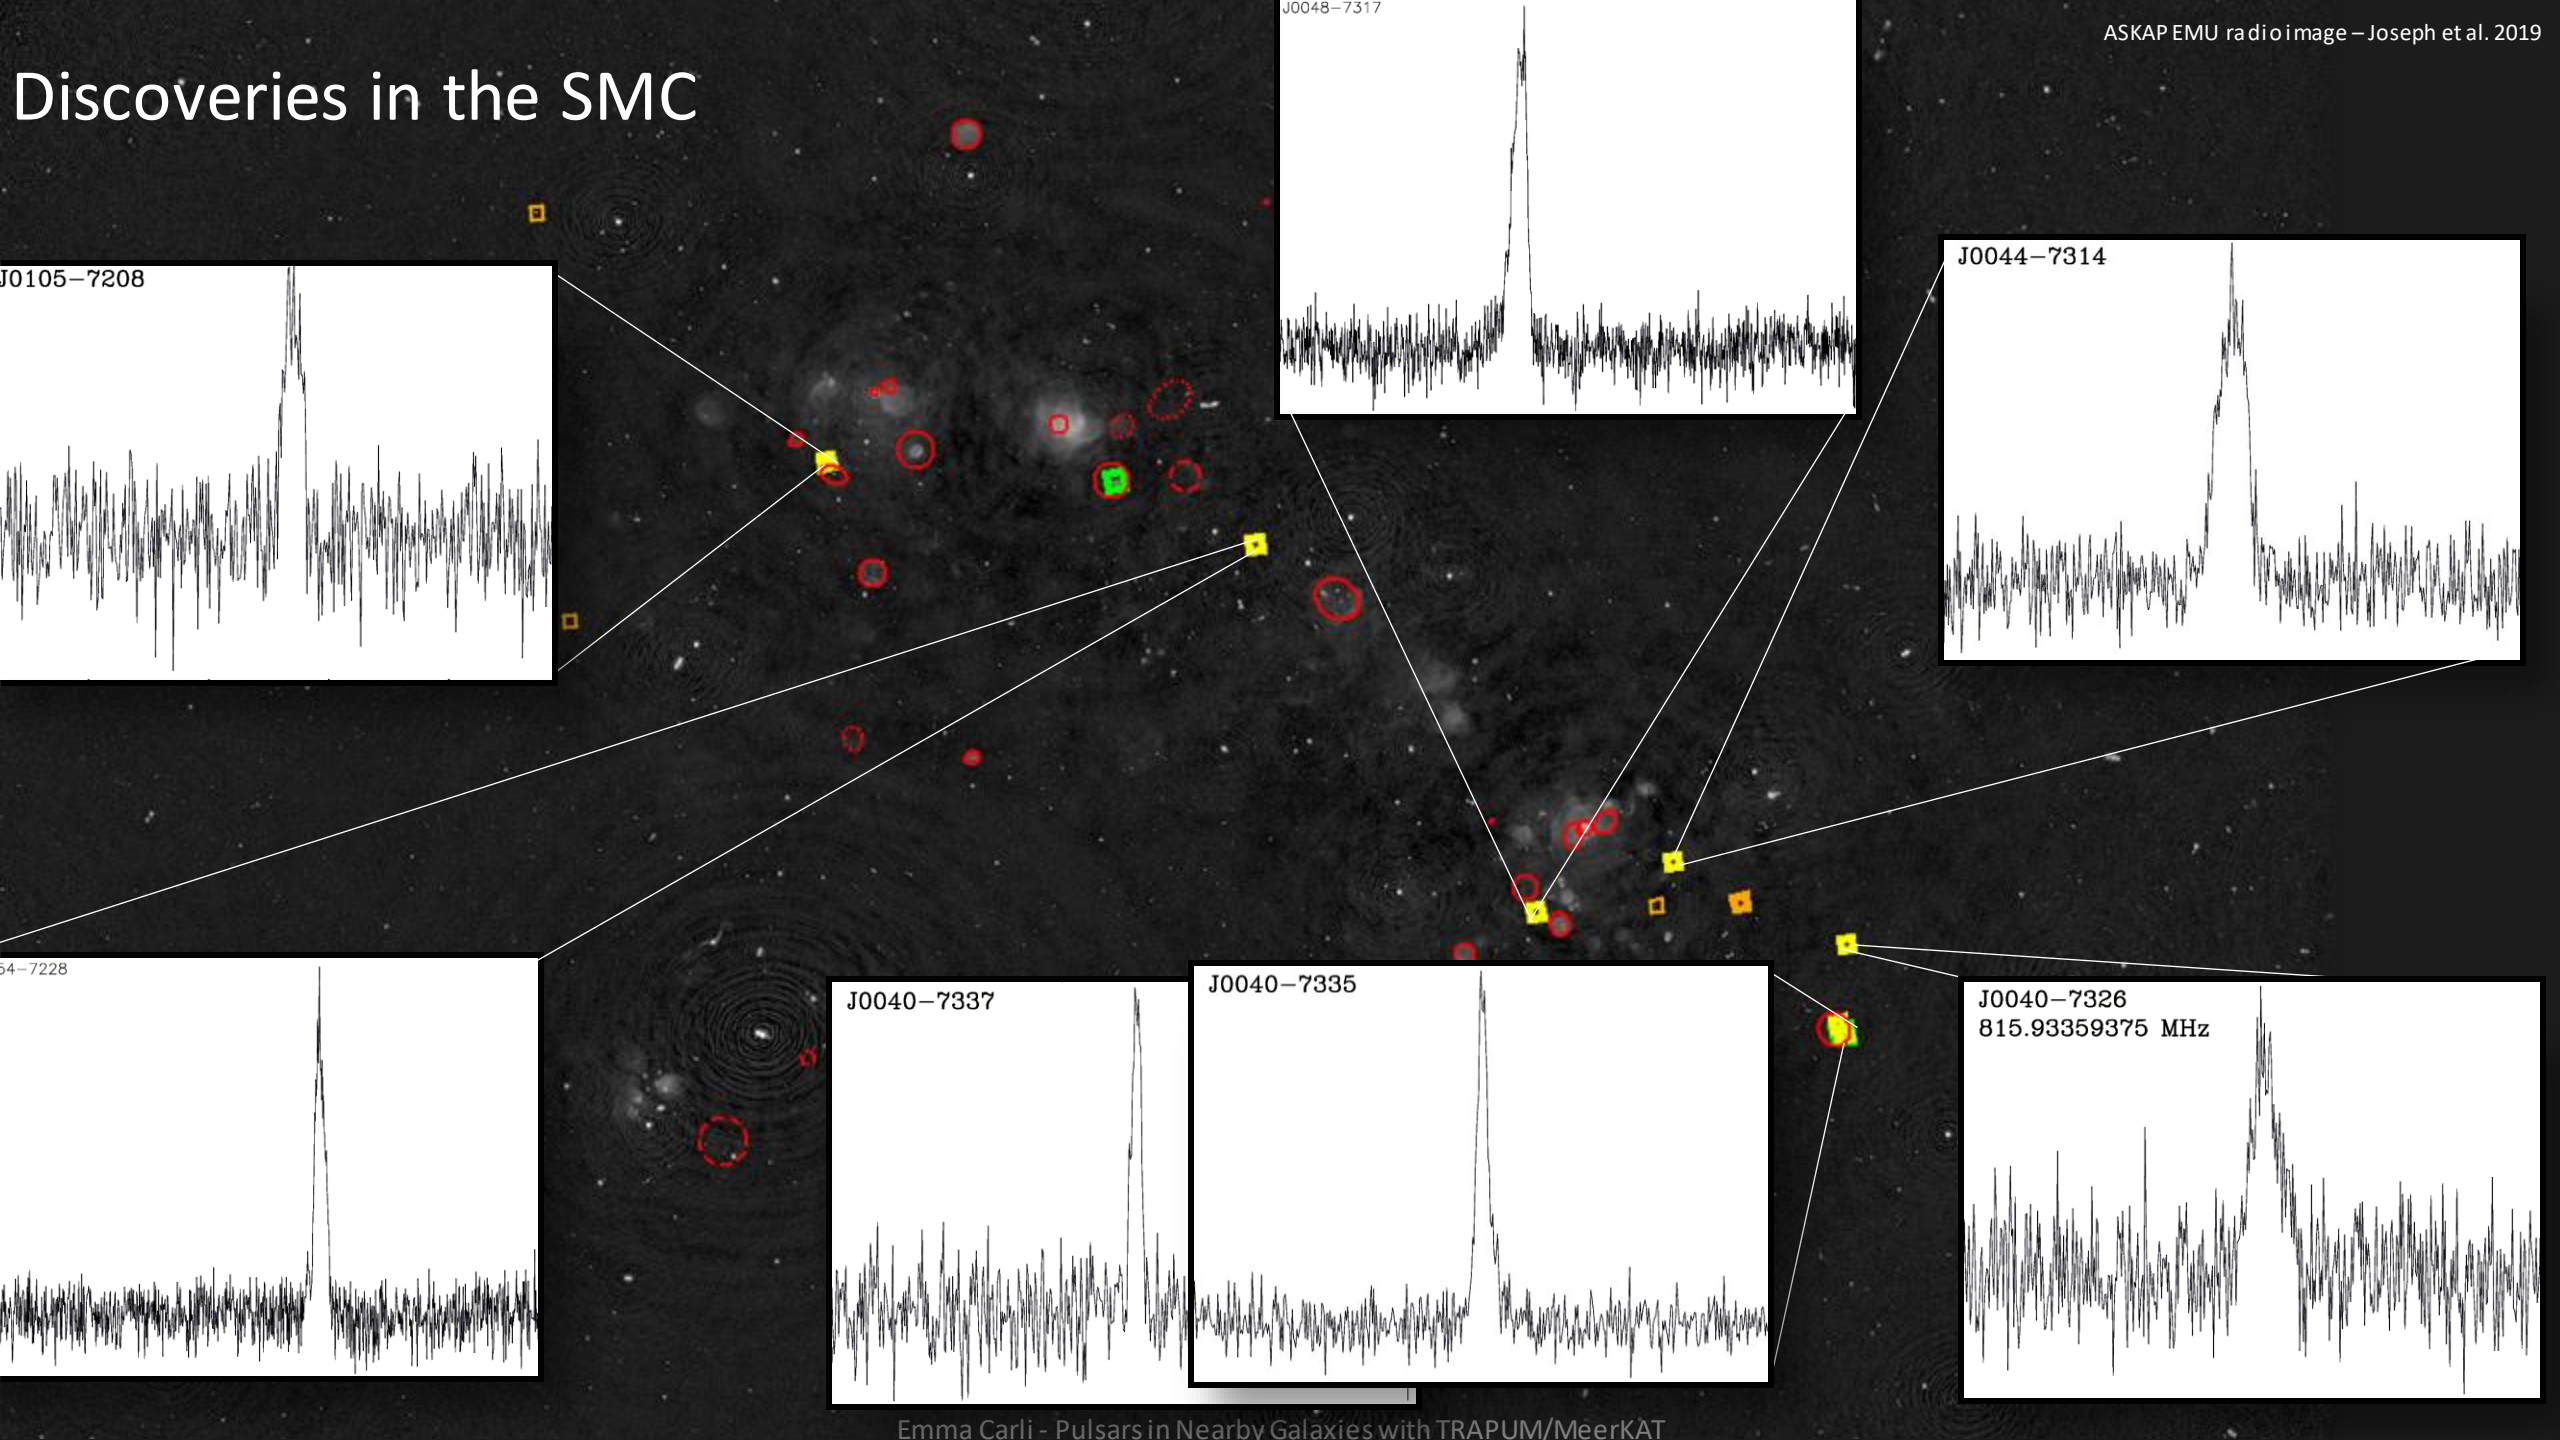

- 7 rotation powered radio pulsar discoveries, **3 of which are <100kyr old**
- Highlights: Two young Big Glitchers, one in PWN, one young antiglitcher?
- All localised to a few arcseconds upon discovery: SeeKAT

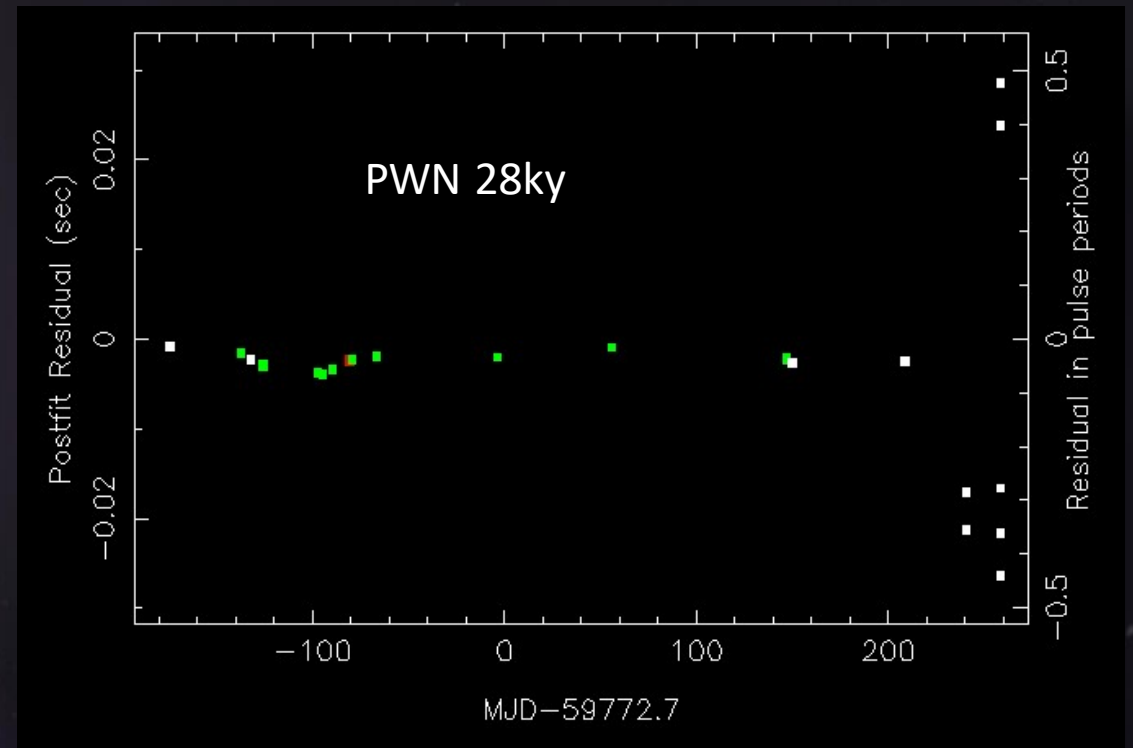

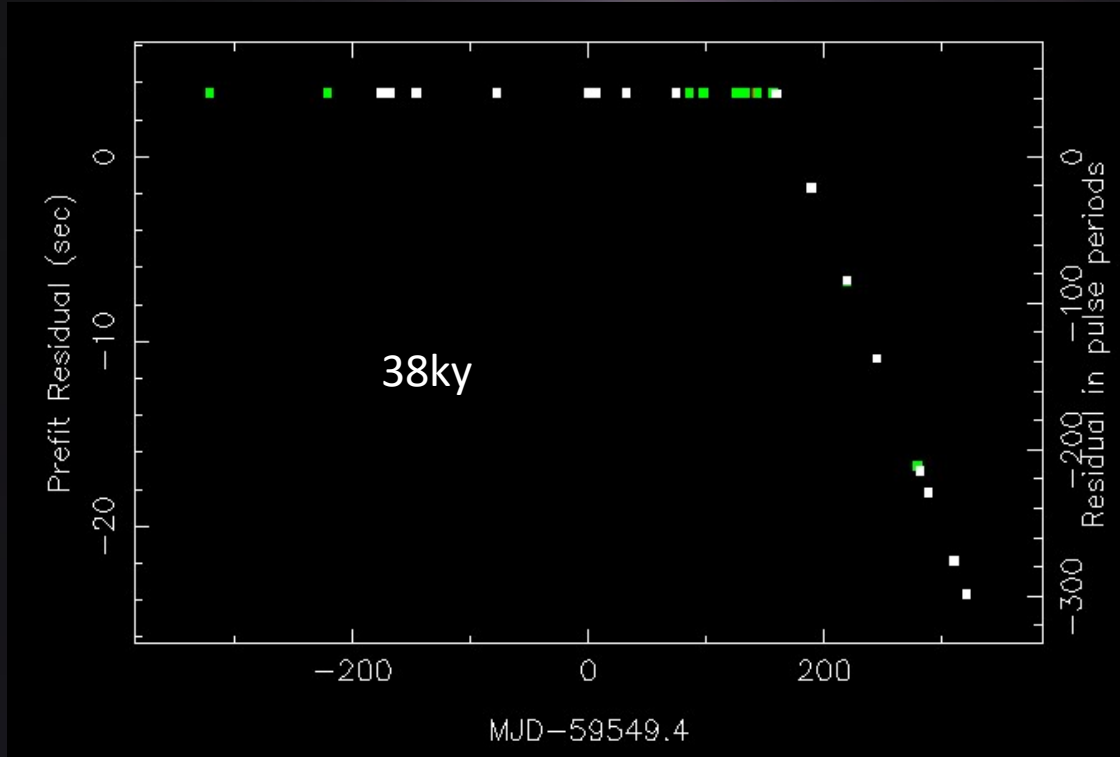

(Bezuidenhout et. al., 2022, RASTI, submitted)

- All have timing solutions (MeerKAT and Murriyang timing campaigns)

Discoveries in the SMC

Glitch monitoring of pulsars @ Murriyang

Previously known pulsars in the LMC

Venu

Only part of LMC shown!

Known
PWNe+PSRs

Known
radio pulsars

- Work led by Venu Prayag and Marisa Geyer (UCT)
- Irregular dwarf galaxy 50kpc away
- 25 radio pulsars known, mean DM 107 pc cm^{-3}
- 5 Pulsar Wind Nebulae, 2 with pulsars
- LMC Crab pulsar twin: seen in X-rays, gamma-rays, optical & giant pulses

Discoveries in the LMC

Venu

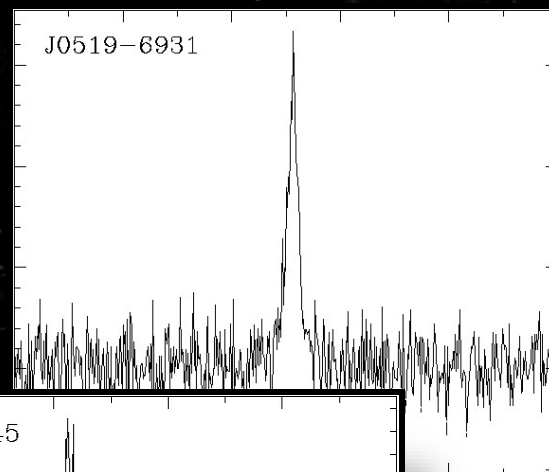

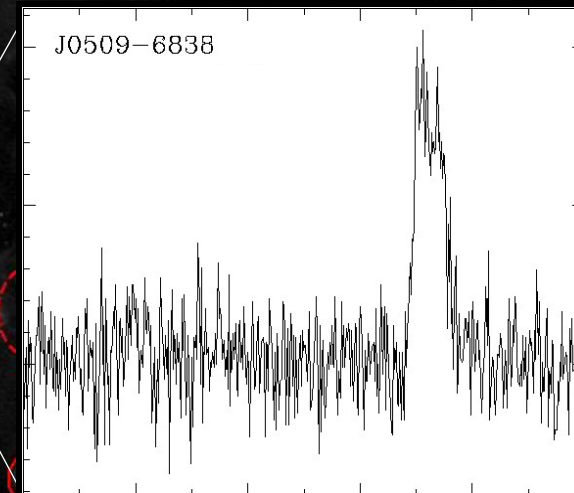

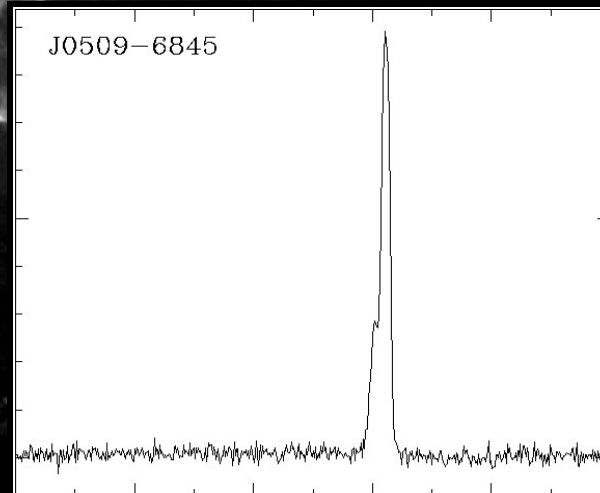

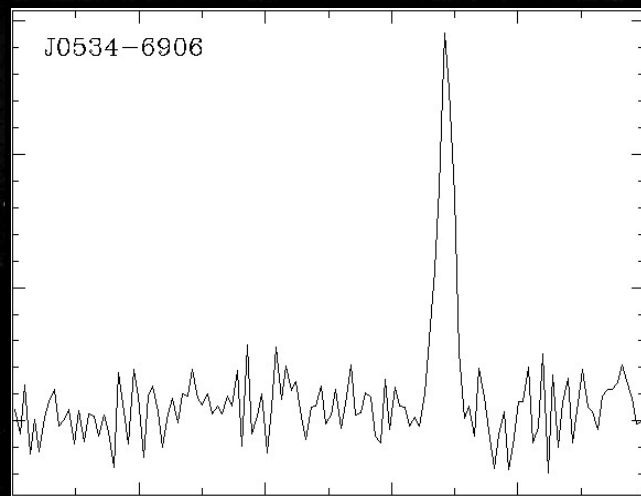

Only part of LMC shown!

New pulsars !

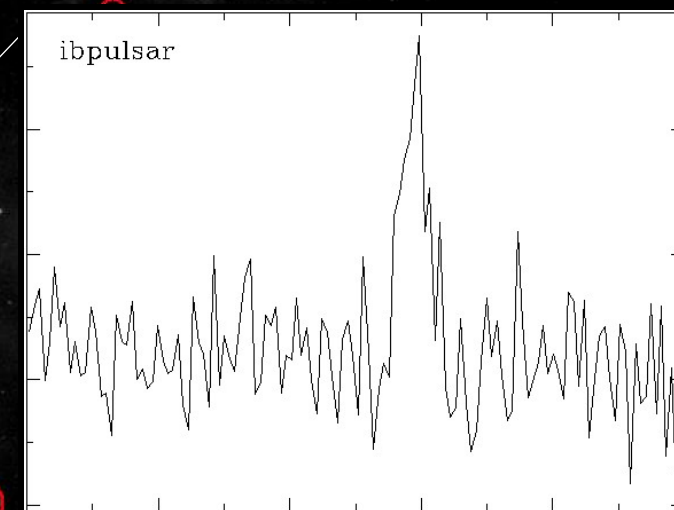

- 4/26! observations complete
- 7 pulsar discoveries: 300ms to 1.6s
- One ~20ky pulsar
- No associations yet
- No detection in SN1987A yet
- All have solutions except for one faint pulsar

Discoveries in the LMC

Discoveries in the LMC

- Incoherent beam discovery
- Incoherent beam \sim Murriyang sensitivity
- Not found in Murriyang archival data of previous LMC surveys

Other galaxies

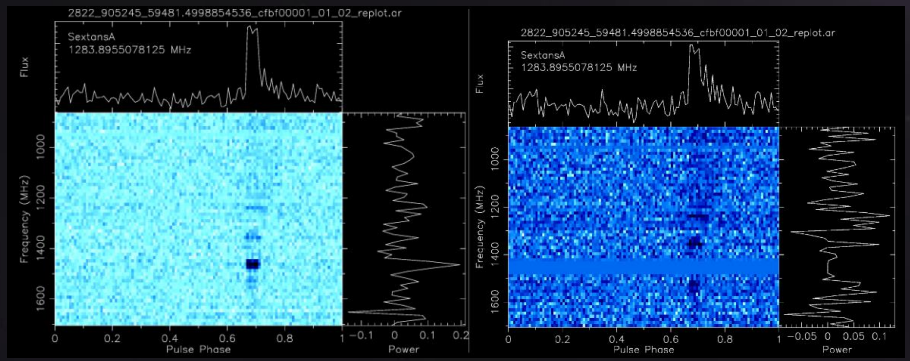

Noirlab

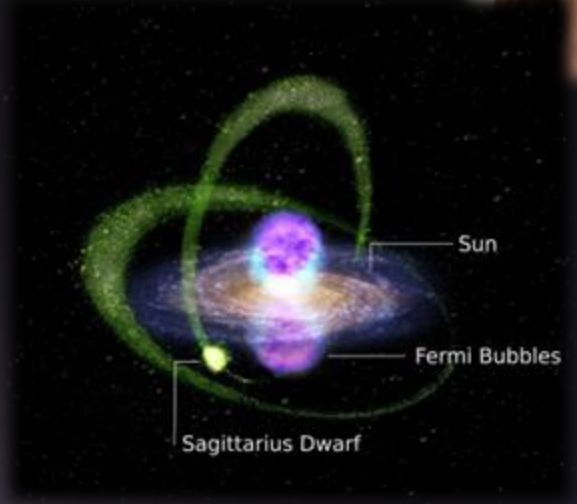

Heinrich

Lucia

A. Tsuboi/Kavli IPMU
Nature Astronomy - Crocker et al. 2022

- Sextans A and B: serendipitous background FRB discovery. Localisation in progress

- Sculptor Galaxy : upper limits (Heinrich Hurter & Christo Venter, NWU, South Africa)

- Sagittarius dSph gamma-ray galaxy search for millisecond pulsars under way (Francesca Calore and Lucia Gebauer, CNRS Annecy, France)

Summary

- TRAPUM Nearby Galaxies has so far doubled the Small Magellanic Cloud galaxy pulsar population
- SMC survey nearly finished, now searching a Globular Cluster of the SMC
- Large Magellanic Cloud Survey has 4/26 observations complete and has already discovered 7 pulsars
- Currently searching for Millisecond Pulsars in the Gamma-Ray emitting nearby Sagittarius dSph galaxy
- Set deep limits on other galaxies + serendipitous FRB discovery
