

Ak has crossed polarisations, when compared to At.

Recording with -invert flag, so recorded data should be non-inverted.

Just before 03UT, possible drive error as source rising during scan.... No time lost...

08:54UT. Restarted schedule. Not clear if source changes were done ok or schedule was stuck... In fact it appears that high Elevation sources (>88 degs?) were flagged as down in the Vex and hence not in the schedule!
