

Recording DAS1 to the mpvs12 local disks: "CURT V002A".

Fringe tests before the main experiment show that the L-band circulars are labelled backwards for Mopra.

For some part of the experiment, the antenna reports SLEWING even though it is really tracking, but with an elevation error of 1.5 arcminutes. I only noticed this towards the end of the experiment, around 21:53 UTC. I wouldn't necessarily believe any off-source flags.
