Recording to ATNF V002B on xraid1 on mpvsi1

20 second recording glitch at 19:25:20UT - this happens every day at this time as a file system database is rebuilt; often no data is last, but this time buffer space must have been exhausted.

Changed recording to ATNF V015A at UT 04:42 (xraid0 on mpvsi1)

Recording crapped out about 40 minutes from the end of the experiment. Was not caught right away, but further attempts to write to the network drive appeared to work at first but actually failed. This was not realised in time, and experiment ended before recording began on local disks.
