Survey and positioning tolerances

mjk. 1 April 1986

    The arguments of AT/20.1/006 are probably a bit
conservative, but set an adequate limit : if we should wish
to exploit redundant baselines, then we will need to have
baselines equal to around 20 cm. This can be relaxed a bit
if exact simultanaity is not required, although it makes
life a bit more complicated.
