

Current Issues

Parkes

- **DAS Control:** DAS GUI runs from “pam2” (which is old pkvs1 machine).

ATCA

- **Problem with Hybrid mode:** We think the CABB “hybrid” mode is broken for “Offset” frequencies. This includes 1400 MHz, 1600 MHz and 4800 MHz.

Mopra

- **L band single IF:** The Mopra L/S receiver only has a single IF available. There will never be any power into DAS2 (nor can it generate useable data!)

ASKAP

- **No VLBI:** ASKAP VLBI is no longer possible
