

DAS GUI freezes

Check DAS module has loaded. E.g:

```
cavsi1:~> lsmod | grep ds ds 10356 4
```

If not try:

```
su /etc/init.d/ds
```

DAS gives communications error in purple popup window on first config after power cycle

Try a second time

DAS shows no flashing "rx" and "busy" lights on front panel of the dataset module.

Bandpass on channels from that DAS will look crap. DAS GUI will still work.

Try a reset on the module.

Try a power cycle.

Try to force the data set to load. Chris knows how to do it.
