

Instructions for formatting disks prior to each VLBI run

Instructions are given individually for each station, although the process is fundamentally the same everywhere - this just allows us to specify machine names for clarity.

[Parkes](#)

[ATCA and Mopra](#)

[Tidbinbilla](#)

[Hobart](#)

[Ceduna](#) Ceduna is not currently capable of electronic data transfer, thus all disks are still returned to the correlator after each run. However if it does become necessary to format disks there (eg if you are using one out of session as a spare), instructions are included here.

[Curtin correlator](#)

If necessary someone could add instructions for Epping?
