

Wind-stowed from the start until 1815. Was able to confirm fringes in both setups before being wind-stowed though :)

First part of the recording was made to cave-store:/data2 (vsib_recv wasn't writing out to /data3 for some reason).

A vlobs problem meant that Mopra continued tracking the source it got to at 1815 and did not progress through the schedule. This issue was fixed by restarting vlobs, and normal operation resumed at 1826.

Second part of the recording and onwards was made to cave-store:/data3.

Mopra wind-stowed at 1902, back at 1921.

Mopra wind-stowed at 2232, back at 2322.
