

- Experiment started using S/X receiver, switched to multifeed Rx @ 2245. It should have better performance. Tsys values recorded before 2245 will be out. Scaling factor to be determined.
- recording to UTAS V002A
- now using multifeed X band, RCP only
- Agilent @ 14 GHz
- 2nd LOs are 777 and 809 MHz
- DAS profile VSOP.PRO

day 348

- cDisko warning: recorder header time out by 1 second.
- stopped schedule at 07:33 to service receiver cryos
- recording continued throughout
- offline for 1.5 hr. back on source at 09:02
- agilent LO failed on x-band about 12:30. changed back to s/x receiver. 2nd LO's 807 and 775 MHz.
- changed DAS profile to VSOP\_HO3.PRO
- recording continued throughout
- offline about 0.5 hr, back on source at 13:02
