Comments:

This is a 64 MHz bandwidth experiment. Please make sure that the BG3 cable is used to connect the DAS to the VSIC. The setup has been made similar to other 4.8 GHz experiments during this run to minimise the need for configuration changes. Please contact Aidan or Bruce at Ceduna if there are any questions about the setup.

Please note that this is NOT a fringe test, we need to keep the raw data and ship it back to Curtin.
