

Array is in H168 configuration. Phase stability is very good, but there are occasionally periods of strong RFI affecting DAS levels and auto-phasing (e.g. between 20:18 and 20:25 UT). In particular, auto-phase was likely to be suboptimal between 03:14 and 04:22 UT.

Didn't track/follow scans 06:22-06:27 UT due to caobs issues.
