

ATCA was observing with CACAL. Could find no sign of this effecting the solutions

I solved for a delay and a phase and applied this to data taken between 06:20 and 06:35. The plot shows the phases after solving with solint of 1 minutes (page 1 ad 2). The 1 minute solutions after a 3 minute calibration has been done, and after the 15 minute solution. See [vt11l.ps](#)

The CACAL was stopped at 9:54:30
