

No fringe test run due to problems with fringe-checking due to outdated mark5access library and slow network. Chris is suspicious there may be a integral second offset in data. Mark5 did not seem to be dumping files at the right time.

Recording to mark5.

Network problems - no contact after 1230 UT.

Network restored ~1950. From logs, it looks like there was a power outage during this time that caused a drives error and possible clock break. Data recorded between ~1513 and 2010 is dubious.
