

- recorded to ATNF V010 A1 - A7
- das profile 64mhz.pro
- smy 424 MHz

NOTE: It seems that the actual disk set used may have been ATNF V011 A1-A7. (CEH 17/08/09)

- onsource from 09:22:30 UT (problems starting the schedule and then with the fs)
- noticed that the levels on the das were too high on chan 2 at 10:20 UT, this means that the tsys measurements will be dodgy for this channel
- ceduna was running a draft schedule! halted at 13:30 UT and correct schedule was started at 13:35 UT (this means Ceduna, and Hobart, were out of sync for ~20min prior to reloading the schedule)
