

WW data not valid before scan no. 0013

Schedule appeared to start normally but no recording was taking place prior to scan 0005. Recorded data was not in correct format, 256 Mbps rather than 1024 Mbps data rate. Suspect that the FS did not reset the recording mode from previous schedule? Halted schedule, restarted, did not seem to make a difference.

Schedule halted, vex file retrieved from atnf, redrugged, schedule started again, data in correct format after this (scan no.0013)

PPS offset ~38.5 us

Urgent maintenance was required on the 12m antenna. Schedule was stopped at scan no.0274 to allow this, schedule and recording not restarted until scan no.0335.
