

## OBSERVER NOTES

Recording to ATNF V008 A1-7. New tsys log started. Kept array tied 12345 on CA03 (CATW109)

Alos recorded to ATNF V008 B1-B7.

## INSTRUCTIONS

Use one set of 7 x 500 GB drives (please record which ones)

Standard setup for CATIE, FoV required is approximately 30 arcseconds, so with EW352 array should be possible to tie all 5 antennas at 2.3 GHz. To be safe, may consider dropping back to 4 if that gives a significantly wider FoV.

Setup disko as per other 512 Mbps experiments i.e. v190 etc.

Please start a new correlator log going for this experiment.
