

Remote recording from mpvsi1 to mpvsi2

Recording to SWIN V006 B1-B7 then SWIN V006 A1-A7.

Remote recording

disko does not support remote recording (cdisko does and will be commissioned real-soon-now)

To do remote recording do the following.

- Log into mpvsi2 as vlbi:

```
-> > ssh vlbi@mpvsi1
```

- Start the receiving program. You must create the data directory and cd into this first. E.g.

```
-> > mkdir /data/xraid0/v210a -> > cd /data/xraid0/v210a -> > vsib_recv
```

- Log into mpvsi1 as vlbi:

```
-> > ssh vlbi@mpvsi1
```

- Run the vsib_record

```
-> > vsib_record -x -t 6.5h -m 2 -o v210a-Mp -H mpvsi2-ext
```

- At disk change, you will have to kill both processes (^C) and cd to a new directory on mpvsi2

NOTES:

Overwritten DAS profiles meant that data was not recorded correctly until 05:32 UT for DAS1 and 05:46 for DAS2. Earlier data is recoverable.
