

ATCA can tie all 6 antennas (default circular pol: RCP, LCP)\

\

Record to the same disks that were used for the preceding experiment. Both experiments should fit on two sets of 500 GB disks.\

\

You will have to do a CACAL (including the 90 degree phase shift for circular polarisation) for each of the three frequency setups before the fringe-check can be done. Make a schedule on a strong calibrator for the CACAL using:\

\

1band 64\

2band 64\

\

scan 1\

\

1freq 1264\

2freq 1312\

\

scan 2\

\

1freq 1364\

2freq 1412\

\

scan 3\

\

1freq 1464\

2freq 1512\

\

Use the same correlator config as used in vx012a.\

\

Start a new correlator log for this experiment, please.
