

We are having issues with the schedule:

The 30m is running the new FS on debian wheezy :

2015.085.01:31:21.44;Log Opened: Mark IV Field System Version 9.11.6

It seems some of the “disk2files” are trying to save more than the 1s ! This then means that the next mk5 command fails and the “mk5cn” times out. After that the schedule goes wrong, all mk5 commands time out.

We have to stop “DIMino” and restart it. The schedule then catches up and continues.

I'll pass this onto Ed, but might want to stop all the “disk2files” in the rest of the schedules. Or check the time extraction syntax.
