

Recording DAS2 to ATNF V002B (on cavsi1).

Tied array is 12345, reference antenna is CA03 on W147.

AGC on the DAS is off, as are the 16cm noise diodes, so all Tsys measurements are likely to be meaningless. There is 1934-638 data for this frequency configuration in the file 2016-03-04_0606.V537A. CABB is in hybrid VLBI mode, so IF1 is the normal 2048 x 1 MHz continuum.
