

Refant CA04 on W104 Array H214

Recording to ATNF V007B (cavsi2:/xraid1)

CA06 (not tied in) died around 08:30 UT. Between 08:30 and 08:35 there will be a few glitches of 10-15 seconds where we tried stopping the array and fiddling with ca06 before restarting. CA06 was not immediately revived, but we stopped messing with the array around 08:35
