

Starting Mopra VLBI from Scratch

VNC Server

Mopra VLBI observing is run from a VNC session on bigrock:1. Note that the VNC session is only accessible from within the ATNF network or via VPN or [ssh port forwarding](#). If you cannot connect your VNC client to this host, check the VNC session is running **on screen :1**. To do this log onto bigrock using the normal observer username and password and run

```
->> ps aux | grep -i vnc
```

The output should be something like the following. You need to check a VNC server (such as Xtightvnc) is running on screen :1. The output should be something like:

```
Xtightvnc :1 -desktop X -auth /home/atcaobs/.Xauthority -geometry 1600x1000 -depth 24 -rfbwait 120000 -rfbauth /home/atcaobs/.vnc/passwd -rfbport 5901 -fp /usr/X11R6/lib/X11/fonts/Type1/,/usr/X11R6/lib/X11/fonts/Speedo/,/usr/X11R6/lib/X11/fonts/misc/,/usr/X11R6/lib/X11/fonts/75dpi/,/usr/X11R6/lib/X11/fonts/100dpi/,/usr/share/fonts/X11/misc/,/usr/share/fonts/X11/Type1/,/usr/share/fonts/X11/75dpi/,/usr/share/fonts/X11/100dpi/ -co /etc/X11/rgb -alwaysshared
```

If VNC is not active then run (this is an alias)

```
->> startvnc
```

Check it returns something like the following and has started on screen :1.

```
->New 'X' desktop is bigrock:1
```

You should now be able to connect your VNC client to the server.

Applications

You should run the following applications. Note to get an xterm on mpvsi1 or mpvsi2, Use the Observing menu at the top right. To get an xterm on bigrock, click the "Terminal" icon to the left of the Observing menu.

Workspace 1

The first desktop is for main observing. Run the following windows:

- atdrivemon: Start from observing menu
- attest: Start from observing menu
- Monica Attenuator monitor: Will start later
- 2 bigrock terminals: One for vlobs, one for preparing schedules etc

Workspace 2

Recorder and DAS control

- cdisko: Start a terminal on mpvs1 then run cdisko2
- DAS gui: Run DAS1 and DAS2 from the Observing menu

Workspace 3

MoniCA monitoring.

Start MoniCA from the observing menu (select Mopra!). Startup the following monitoring windows via the menu Window→New Window→XXXX:

- Wind (favourites→wind)
- Generators (favourites→generators)
- Lightning (environment→lightning→summary_graph)
- Attenuation and IF power (Load Arrangement and load ~atcaobs/VLBIpowerAndAtten). Move this window to workspace 1 (Top left button on the window with a downwards arrow and select Send to...→Workspace 1)
