

Monitoring the Disk-based Recorder

It's worth keeping a regular watch on the disko GUI for any problems. Once per 20 mins or so is good. Here are some things to look for:

- **Last PPS** should be OK
- **Last Bigbuf** should be 100%. If not, it means the recorder is struggling to keep up with writing the data to disk.
- **Missed 1PPS** should be 0
- **Last block** should be increasing every integration cycle (typically 10sec)
- If the Apple Xraids are in use, check that they are being written to regularly. You should see lots of blue lights.
